

Princeton Public Safety Building Notes

- Can a hose tower be incorporated into the building design, maybe incorporated into the general bay storage (with the same roof footprint)?
- Decon room – eliminate one shower unit, replace with gear washer/extractor?
- Seem like a lot of “dead space” between Bunk 1 and Chiefs Office. Can a 3rd bunk room be added?
- Yes, to keeping Training Room / EOC. Police notes indicate more internal training to help justify this.
- Will there be a second level (mezzanine) of Bay Storage? If not, there needs to be more consideration of storage.
- Is the Apparatus Floor open to roof or will there be a ceiling? Heating consideration, insulation, ice dams.
- Where would the proposed weight room go?
- Elevator – why? If you don’t make second floor public meeting space, you should not require one.
- Is there enough turnout gear area?
- Combined locker room – is that a good idea?
- Are there too many PD offices – seems to be too few fire department offices.
- Can bunk space and fire locker room be moved to the second floor and make more room for fire department storage?
